**16. CALL MANAGEMENT SERVICE**

**Note:** The business service elements of this item are forborne from regulation in certain exchanges, as identified in Section 100, item 3.02.

**16.01 GENERAL**

- (a) Call Management Service (CMS) is comprised of network-based line features which are furnished with individual-line primary exchange services except Public and Semi-Public Telephone services. CMS will be available to multi-line and Centrex customers as the availability of suitable terminal equipment exists. The provision of these features, and the ability to furnish the telephone number from which a call originates, are available from a DMS-10 switch and are subject to the availability of suitable facilities.
- (b) Notwithstanding any other provisions of the Company's tariffs and as an exception to the Terms of Service (see Ontario Independent Services Tariff Section 1), any non published telephone number from which a call originates is furnished, as facilities permit, on a call-by-call basis to CMS customers.

**16.02 DESCRIPTION**

- (a) Call Display and the Call Display-Name option provides the means to activate the CMS customer's visual display of the telephone number and the associated name respectively from which the call is originating. In order to access this feature the customer must have a display device which is compatible with CMS. Certain telephone sets offered in Section 490 provide such a display device. Call Display is a prerequisite for the Call Display-Name option.
- (b) Call Return enables the customer to automatically re-dial the telephone number of the last incoming or outgoing call, whether the call is answered or not. If the number is busy, the network scans its availability for a period of 30 minutes and, when it is free, notifies the customer by a distinctive ringing signal. The call is automatically processed when the customer answers.
- The Call Return feature will not work if the last incoming call was blocked by the originator. The customer attempting to return the call will receive a message indicating that the call cannot be completed.
- (c) Call Trace allows the called customer to have the last incoming call traced and the telephone number recorded by the Company for use by law enforcement agencies. A voice response system advises the customer that a call trace request was successful. Call Trace is offered as part of the basic network access service to individual line customers. **C**

GENERAL TARIFF

MISCELLANEOUS EQUIPMENT

16.02 DESCRIPTION (cont')

- d) Call Screen enables the customer to have calls which originate from up to 12 selected telephone numbers diverted to a standard announcement.
- e) Visual Call Waiting is an integrated package, comprised of Call Waiting, Call Display, and Call Display Name functions, enhanced to also provide a visual display of the name and number associated with incoming calls to an off-hook customer. As an exception, calls made with Call Blocking invoked will result in "Private Name/ Private Number" being displayed. Visual call waiting is only available to single-line customers who are Call Display-Name capable and who use a Spontaneous Call Waiting with Identification compatible display terminal.
